

SET C

1. The number of operations done by the CPU is dependent upon the ... of the microprocessor.
A. RAM B. DRAM
C. ROM D. Clock frequency
2. The command for plotting points lines and characters are interpreted by:
A. ALU
B. Interpreter
C. Display processor
D. Compiler
3. External devices are connected to the computer through a:
A. Port B. Server
C. Networking D. Monitor
4. Artificial intelligence is a feature of which generation of computer?
A. Second B. Fourth
C. Third D. Fifth
5. Notepad is used for:
A. Only text files
B. Temporary store
C. Formal layout and print
D. HTML text storage
6. One GB is equal to MB.
A. 2^5 B. 2^{20}
C. 2^{10} D. 2^{30}
7. Which is not a common memory in personal computer?
A. Mask ROM B. EPROM
C. PROM D. EEPROM
8. The unit of hardware an operator uses to monitor computer processing is the:
A. Card reader B. Line printer
C. CPU D. Console
9. Command to copy all files from floppy drive A: to a directory MY FILES in drive C:
A. Copy C: *.txt A:MYFILES
B. Copy C: *. * A:MYFILES
C. Copy A: *.txt C:MYFILES
D. Copy A: *. * C:MYFILES
10. Windows XP is:
A. Application software
B. Program software
C. Utilities software
D. Operating system
11. For the binary tree below, the set of leaf nodes is:

```
graph TD; A((A)) --- B((B)); B --- D((D)); B --- C((C)); C --- E((E));
```

A. {A, B} B. {E, D}
C. {B, C, D} D. {C, D}
12. What is the uniform interface for users providing a collection of standard expression for storing and retrieving data in relational database?
A. Structured Query Language
B. Filtering
C. Virtual Storage Access Method
D. None of the above
13. Queues are referred to as
A. LIFO B. FIFA
C. FIFO D. FAO

14. A complete binary tree of level 5 has many nodes?
A. 15 B. 33
C. 25 D. 63
15. Which is the first commercial computer?
A. UNIVAC B. CISE
C. ENIAC D. Mark 1
16. AVL trees are binary search trees:
A. Balanced B. Empty
C. Skewed D. Threaded
17. HTTP is:
A. A designation within a URL that indicates hypertext resources
B. Address of a URL
C. Link of a hypertext
D. None of the above
18. The last node of the linear linked list always points to:
A. The first node of the list
B. To the external pointer to the beginning of list
C. To null
D. Header of another list
19. An entity is:
A. A collection of items in an application
B. A distinct real-world item in an application
C. An inanimate object in an application
D. A data structures
20. System analysis have to interact with:
i) Managers of organizations
ii) Users in the organization
iii) Programming team
iv) Data entry operator
A. (iii) and (iv) B. (ii), (iii), and (iv)
C. (i), (ii) and (iii) D. (ii) and (iii)
21. In the requirement analysis data, process, application and information are studied for:
A. Recovery B. Black Box
C. Performance D. White Box
22. DFD which is used to replace physical existence by some logic is:
A. E-P-D B. SDLC
C. Physical DFD D. Logical DFD
23. Requirement analysis in database does not consider:
A. User-views of the data
B. Data attribute
C. Financial estimate
D. Entities and their primary keys
24. Procedure development occurs within the Phase
A. Structured design
B. Conversion
C. System building Phase
D. Maintenance
25. Operating system that uses the BIOS:
A. Never need to know the location of the part
B. Need to know the location of the part
C. Need to know the proper register address
D. None of the above
26. Structured design produces computer programs that are:
A. Easily understood
B. Tested in a bottom up fashion
C. Easily maintained
D. Both A and C above
27. Anyone who uses an information system of the information it produces is:
A. An end user
B. A knowledge worker
C. A specialist
D. A technician

28. Data flow diagrams are usually developed during:
- System design phase
 - Implementation phase
 - Feasibility study phase
 - Systems analysis phase
29. Containing no children on two disjoint children is:
- Link list
 - Array
 - Binary tree
 - Vertex
30. The chunks of a memory are known as:
- Page
 - Sector
 - Frame
 - Offset
31. The operating system keeps the information of files in a table called:
- Directory
 - Index table
 - Folder
 - File Allocation table (FAT)
32. Which is not an essential file in a MS-DOS boot disk?
- IO.SYS
 - XCOPY.COM
 - MSDOS.SYS
 - COMMAND.COM
33. A front-end processor is usually used in:
- Multiprogramming
 - Time sharing
 - Virtual storage
 - Multiprocessing
34. An operating system is a program or a group of programs that:
- Produces text from the typing efforts of a user
 - Manages the resources of the computer
 - Helps in checking the spelling of words
 - Uses a database for the storage of data
35. It can have static indexing and dynamic indexing is:
- Sequential
 - Indexed
 - Direct
 - Indexed sequential
36. What is the name of the operating system that reads and reacts in terms of actual time?
- Batch system
 - Real time system
 - Quick response system
 - Time sharing system
37. Who decide which process should be executed next?
- Short term scheduler
 - High level scheduler
 - Operating system
 - Intermediate queue
38. A linear data structure which contains the homogeneous data object is:
- Array
 - Vertex
 - List
 - Tree
39. The Relational Model defines two root languages-Relational Algebra and Relational calculus. for accessing a:
- Document file
 - Flat-file database
 - Relational database
 - Text file
40. Meaning of metadata is:
- Data of data
 - Data dictionary
 - Data about data
 - Data definition

41. Give the following relation:
Vendor order (vendor no. order no.
vendor name, qty. supplied,
price/unit) it is not in 2 NF because:
A. It is not in 1 NF
B. It has a composite key
C. Non-key attribute vendor name is
dependent on vendor no. which is
one part of the composite key.
D. Qty. Supplied and price/unit are
dependent
42. A relation is said to be in Boyce Codd
Normal Form (BCNF) when.
A. It has overlapping composite keys
B. It has no composite keys
C. It has no multi-valued dependencies
D. It has no overlapping composite
keys which have related attributes
43. Collection of interrelated data is
known as:
A. DBMS
B. Data Model
C. Database
D. All of the above
44. Which of the following is not a
relational database?
A. Dbase IV B. SQL server
C. Sybase D. Reflex
45. The relation algebra is a
language.
A. Lower level language
B. Non-procedural language
C. Procedural language
D. Complex language
46. The highest level in the hierarchy of
data organization is called:
A. Data bank B. Data file
C. Database D. Data record
47. The basic SQL SELECT statement
has three clues:
A. SELECT, FOR, NEXT
B. SELECT, UNIT, END
C. SELECT, NEXT, FOR
D. SELECT, FROM, WHERE
48. Which one is not a level of data base
services?
A. Physical level
B. Internal level
C. Conceptual level
D. External level
49. Which of the following is not
characteristic of a relational data-
base model?
A. Tables
B. Complex logical relationships
C. Tree like structure
D. Records
50. Collection of records connected to
one another in the form of link
(graph) is known as
A. Hierarchical B. Relational
C. Network D. All of the above
51. Demand paging is used by the
operating system for:
A. Memory management
B. Printing management
C. Display management
D. Not all above
52. One of the main objectives of a
DBMS is to:
A. Create a database for an
organization
B. Facilitate sharing of a database by
current and future application
C. Allow sharing application programs
D. Replace file-based systems

53. Which is the part that transmits data from one part of the computer to other?
- BUS
 - Hard disk
 - CPU
 - None of the above
54. What is a preprocessor directive?
- A message from compiler to programmer
 - A message from compiler to the linker
 - A message from programmer to the preprocessor
 - A message from programmer to the microprocessor
55. What is the full form of OOP?
- Object Oriented Programming
 - Object Occupied Planning
 - Object Occurring Process
 - Operators Organizing Process
56. What does '|' mean in C programming?
- Bitwise AND
 - Bitwise OR
 - Bitwise Exclusive OR
 - One's Complement
57. A programming language is a notational system for describing computation in machine readable and human-readable form. "Which one of below choice is not a key concept in his definition?"
- Notational system
 - Machine-readability
 - Computation
 - Human-readability
58. Programming language abstractions fall into two general categories:
- Basic abstraction and structured abstraction
 - Basic abstraction and control abstraction
 - Data abstraction and Control abstraction
 - Structure abstraction and unit abstraction
59. The following is the lowest level programming language
- Assembly language
 - BASIC
 - C
 - Machine language
60. Program written in C is faster than QBASIC program because:
- It runs only after compilation
 - It is a low-level language
 - It runs through interpreter
 - It uses library routines
61. On which connection, the data transfer is observed as the fastest transfer?
- UTP Cable Network
 - Co-Axial Cable Network
 - Fiber Optics Network
 - Wireless Network
62. A model of computing in which one computer requests something and another computer seeks to fulfill the request is called:
- Question-and-answer model
 - Client-server model
 - Interaction protocol
 - Open distributed system

63. In a connection more than two devices can share a single link
A. Point-to-point B. Primary
C. Multipoint D. Secondary
64. Decryption and Encryption of data are the responsibility of the Layer
A. Physical B. Presentation
C. Datalink D. Application
65. The topology of network refers to how the wiring of the workstations and servers is laid out. There are a number of different topologies, and each work well in certain circumstances. A token-ring network can use which of the following topologies?
A. Star B. Star ring
C. Linear bus D. Ring
66. Firewall is not useful to:
A. Ensure controlled access to internet services
B. Protect the network from outsiders
C. Protect the internet protocols currently in use
D. Bypass crypto is a bountiful source of security flaws
67. The subnet mask for class "C" network address with 4-bits subnetting is:
A. 255.255.255.0
B. 255.255.255.248
C. 255.255.255.240
D. 255.255.255.192
68. Select the true statement:
A. All internet gateways are router
B. All bridges are router
C. All routers are internet gateways
D. All routers are bridges
69. Which protocol listed below is non-routable protocol?
A. Net BEUI B. IP/SPX
C. TCP, IP D. OSI
70. A defines a point of reference against which you can measure network performance and behavior when problem occur.
A. Access points
B. Network addressing
C. Baseline
D. Latency line
71. Mandatory protection is the notation that should be security boundaries inside a computer that can't be..... By system users.
A. Modified/ disabled
B. Writable
C. Enabled
D. All of the above
72. The computer system is usually designed with a hierarchy of memories as;
A. Primary memory, CPU registers, secondary memory
B. CPU registers, primary memory, secondary memory
C. Primary memory, secondary memory, CPU registers
D. CPU registers, secondary memory, primary memory
73. An argument passed by reference passes
A. A global variable
B. A constant
C. A value
D. An address

74. A syntax error is signaled by the:
A. Compiler B. Editor
C. Linker D. A debugger
75. Translation of assembly codes into binary or 'object codes' is performed by special program called....
A. A compiler B. An assembler
C. An interpreter D. A debugger
76. In e-commerce digital signature is used for:
A. Security B. Authentication
C. Firewall D. Threat
77. What are the two most cited reasons for not purchasing online?
A. Security and price
B. Security and reputation
C. Security and quality assessment
D. Price and quality assessment
78. E-government can generally include all of the following except.
A. Providing benefit to citizens
B. Selling commercial items
C. Providing access to government information
D. Providing government forms
79. B2B, B2C, B2F, are the types of:
A. E-business
B. Operation system
C. Network Models
D. Data Control Methods
80. By electronic commerce we mean:
A. Commerce of electronic goods
B. Commerce which depends on electronics
C. Commerce which is based on the use of internet
D. Commerce which is based on transactions using computers connected by telecommunication network
81. Which of the following is not a type analysis conducted during the web-engineering process?
A. Content analysis
B. Functional analysis
C. User Interaction analysis
D. Market analysis
82. Which one is not a criterion for data warehouse RDBMS?
A. Query performance
B. Load processing
C. Loud performance
D. Credibility of sources
83. Data warehousing does each of the following except.
A. Enable decision makers to model and remodel data
B. Allows easy alteration of data
C. Can provide a company with a more precise understanding of its customers behaviors"
D. All of the above
84. The capability that is being used to redesign and reshape organization transforming their structure, Scope of operations, reporting and control mechanisms, work practices, work flows, products, and services best describes:
A. Information technology infrastructure
B. Information architecture
C. System's blueprint
D. Inter organizational network
85. Basic issues in database enterprise
A. Data distribution strategies
B. Data manipulation languages
C. Query processing and optimization
D. All of the above

86. A large repository of historical data that can be integrated for decision support:
- Data angling
 - Data mart
 - Data directory
 - Data warehouse
87. is a software architecture facilitating the flow of information among different functions of an organization?
- Enterprise Resource Planning (ERP) System
 - Information Resource Management (IRM)
 - Strategic Management Information System (SMIS)
 - Decision Support Systems (DSS)
88. How many forms can you have on a web page?
- 32
 - 128
 - 64
 - Depends upon the size of memory
89. What is URL known as:
- Unix readable link
 - Universal resource locator
 - Uniform resource locator
 - Uniform readable link
90. MIS incorporates which of the following concepts?
- Decision support system
 - End user computing
 - Information resource management
 - All of the above
91. No. of licenses issued by NTA for video conferencing telecommunications services (up to 15 July, 2005) is:
- 1
 - 7
 - 10
 - 13
92. Who is the member secretary of National Information Technology Development Committee (NITDC)?
- Executive Director of NITC
 - Joint Secretary of MOST
 - Secretary of MOST
 - Chairman, CAN
93. Unicode provides a unique number for every character:
- No matter what the platform
 - No matter what the language
 - No matter what the program
 - All of the above
94. Which is not the police to be pursued for the implementation of the IT strategies as per the IT policy 2057?
- Declare IT sector a priority sector
 - Use IT to promote e-commerce, education, e-health etc.
 - Provide internet facility gradually to all VDCs.
 - Provide internet facility to all government offices
95. Which one of the following is not the Nepali Fonts?
- Preeti
 - Tuga
 - Kantipur
 - Sangrilla
96. To implement Digital Signature:
- Private key is needed
 - Public key is needed
 - Both (A) & (C)
 - None of the above keys are needed
97. In the "Electronic Transaction Act B.S." ____ A system for producing a secure key pair consists of a private key for creating digital signature and a public key for verifying the digital signature is referred to as:
- Asymmetric crypto system
 - Information verification system
 - Digital verification system
 - Digital security system

98. High level commission for IT (HLCIT) chaired by Rt. Hon. Prime Minister was formed in A.D:

- A. 2000 B. 2002
C. 2001 D. 2003

99. The first computer used at the central Bureau of statistics (CBS) was:

- A. ICL 2950/10
B. Data General (DG)
C. PRIME
D. IBM 1401

100. The government will act as a promoter, facilitator, and regulator it is:

- A. Vision of IT policy 2000
B. Strategy of IT policy 2000
C. Objective of IT POLICY 2000
D. None of the above

ANSWER SHEET
