

1. A system is in safe state if.....
 - A. The system can allocate resources to each process in some order and still avoid a deadlock
 - B. There exists a safe sequence
 - C. Both A and B
 - D. None of the above
2. In what tree, for every node the height of its left subtree and right subtree differ at least by one?
 - A. Binary search
 - B. Complete
 - C. AVL
 - D. Threaded binary
3. In a Hierarchical model records are organized as
 - A. Links
 - B. Graph
 - C. Tree
 - D. List
4. A.....in a table represents a relationship among a set of values.
 - A. Column
 - B. Entry
 - C. Row
 - D. Key
5. Data integrity control
 - A. Is used to set upper and lower limits on numeric data
 - B. Requires the use of passwords to prohibit unauthorized occurs to the file
 - C. Has the data dictionary keep the data and time of last access last back-up and most recent modification for all files
 - D. None of the above
6. For the Project to be financially feasible which of the following condition is true?
 - A. Cost Benefit Ratio < 0
 - B. Net Present worth > 0
 - C. IRR = 0
 - D. All of the above
7. XML is a/an
 - A. Imperative language
 - B. Standard
 - C. Declarative language
 - D. None of the above
8. When was NEA established?
 - A. 2040 B.S.
 - B. 2042 B.S.
 - C. 2041 B.S.
 - D. 2043 B.S.
9. Ac used to maintain temperature in
 - A. Data center (DC)
 - B. DRC
 - C. Both (A) & (B)
 - D. None of the above
10. The universal gate is.....
 - A. NAND gate
 - B. AND gate
 - C. OR gate
 - D. None of above
11. Which gate is NOR/OR path?
 - A. ECL
 - B. DTL
 - C. TTL
 - D. CMOS
12. If some device requires urgent service normal execution of programs may sometimes be preempted using....
 - A. An interrupt signal
 - B. DMA
 - C. To request to memory modules
 - D. All of the above
13. During the execution of a program which gets initialized first?
 - A. MDR
 - B. PC
 - C. IR
 - D. MAR
14. The computer architecture aimed at reducing the time of execution of instructions is.....
 - A. CISC
 - B. ISA
 - C. RISC
 - D. ANNA

15. To increase memory for operating system
- A. Cache memory is used
 - B. Memory for OS is reserved
 - C. Virtual memory is created
 - D. None of the above
16. Terminal Table is
- A. A permanent table listing all keys words and symbols of the language in symbolic form
 - B. A permanent table of decision rules in the form of patterns for matching
 - C. A temporary table a full or partial list of the tokens as they appear in the program
 - D. Contains all constants in the program
17. Accumulator is a
- A. Hardware circuit
 - B. Combinational circuit
 - C. Register
 - D. Finite state machine
18. Which of the following addressing modes permits relocation without any change whatever in the code?
- A. Indirect addressing
 - B. Base register addressing
 - C. Indexed addressing
 - D. PC relative addressing
19. Which one of the following is the deadlock avoidance algorithm?
- A. Round-robin algorithm
 - B. AK's algorithm
 - C. Elevator algorithm
 - D. Banker's algorithm
20. Scheduling is
- A. Allowing job to use the processor
 - B. Unrelated to performance considerations
 - C. Quite simple to implement, even on large mainframes
 - D. The same regardless of the purpose of the system
21.are indexed structures.
- A. Linear list
 - B. Transverse tree
 - C. Linked arrays
 - D. None of above
22. Classes are useful because they
- A. Are removed from memory when not in use
 - B. Permit data to be hidden from other classes
 - C. Bring together all aspects of an entity in one place
 - D. Can closely model objects in the real world
23. The high degree of Modularity of software component is achieved by having
- A. Low coupling and high cohesion
 - B. High coupling and high cohesion
 - C. Low coupling and low cohesion
 - D. High coupling and low cohesion
24. To sort many large objects or structures, it would be most efficient to place
- A. Reference to them in an array and sort the array
 - B. Them in a linked list and sort the linked list
 - C. Pointers to them in an array and sort the array
 - D. Them in an array and sort the array

25. What is the use of sub netting?

- A. It divides large one network into several small ones
- B. It divides network into network classes
- C. It speeds up the speed of the network
- D. None of the above

26. The model which estimates the total effort in terms of person, months of the technical project staff is

- A. Spiral
- B. Prototyping
- C. Waterfall model
- D. COCOMO model

27. In FTP protocol, client contacts server-using.....as the transport protocol

- A. Transmission control protocol
- B. Datagram congestion control protocol
- C. Stream control transmission protocol
- D. User datagram protocol

28. Which Layer of international standard organization OSI model is responsible for creating and recognizing frame boundaries?

- A. Physical Layer B. Transport Layer
- C. Data link Layer D. Network Layer

29. Which of the following data structure is linear data structure?

- A. Trees B. Arrays
- C. Graphs D. None of above

30. ARP (Address Resolution Protocol) is a

- A. TCP/IP protocol used to dynamically bind a high-level IP address to a low-level physical hardware address
- B. TCP/IP high level protocols for transferring from one machine to another
- C. Protocol used to monitor computers
- D. Protocol that handles error and control messages
